

NEW Pulsatron MP 4-20mA Option Metering Pump Available Soon!

Pulsafeeder's Pulsatron MP Series optional 4-20mA output signal provides a remote indication of pump speed, remotely confirms the pump's speed is adjusting to your process parameters, and estimates chemical usage over time.

The output transmits a 4-20mA signal proportional to the actual speed of the pump and there are no programming requirements for the 4-20mA to be active. The 24VDC output will source 4mA = 0 Strokes per minute and 20mA = 125 Strokes per minute with the signal cord provided with the pump. The maximum loop impedance is 850 Ohms.

The Pulsatron MP offers the features and functions that create simple to use, reliable, robust diaphragm metering pumps that matter to water treaters, effectively and safely distributing chemical(s) into their systems.

Flows: 3 GPD to 504 GPD / 0.5 LPH to 79.5 LPH
Pressures: 20 PSIG to 300 PSIG / 0.5 LPH to 21 BAR

SERIES MP 4-20MA OUTPUT OPTION

NEW
4-20mA Output

Pulsatron Electronic Metering Pumps Are Reliable And Accurate.
The Pulsatron Series of metering pumps feature premium construction with few moving parts and highly reliable electronics.

ROBUST

Robust design keeps your pump operating for years with minimal maintenance.

SAFETY

The accompanying bleed valve assembly ensures easy priming and leak free assurance.

NSF 61 CERTIFIED

Tested and Certified by WQA against NSF/ANSI 61 & 372. PVDF and PVC Degassing Head Pumps. See www.wqa.org for certification parameters.
